

ABOUT ME

Highly motivated tech learner proficient in development using modern tools and technologies such as MERN stack, FastAPI. Refining skills for Data-Driven solutions using Python, Machine Learning and data analysis techniques. Experienced in delivering sessions and workshops, demonstrating content delivery and presentation skills. Passionate about research, problem-solving, and applying AI/ML to real-world challenges. Currently enhancing expertise in advanced data science and machine learning through hands-on institutional training, with the goal of contributing impactful, innovative solutions in AI-driven projects.

EXPERIENCE

Visiting Faculty @ LJSCA

July 2024 - July 2025

- Successfully delivering hands-on sessions on DJANGO and formerly ASP.NET MVC
- Designed and executed lesson plans incorporating live coding, project-based learning, and interactive discussions
- Enhanced technical presentation, content structuring, and public speaking skills through continuous feedback and reflection

AI - ML Trainee @ Hyperlink infosystem pvt ltd.

Dec 2025 - Present

- Developed and implemented machine learning models for real-world problem statements using Python and popular ML libraries.
- Collaborated on end-to-end AI pipelines including data preprocessing, model training, evaluation, and deployment.
- Built backend APIs using FastAPI to serve ML models efficiently in production environments.
- Worked with Large Language Models (LLMs) for tasks such as text generation, processing, and intelligent automation.

EDUCATION

Data Science - TOPS Technologies

2025-2026

Grade: -

MSc (IT) - LJSCA

2024-2026

Grade: -

BSc (IT) - LJSCA

2021-2024

Grade: 7.28

SKILLS

Soft Skills

- Quick Adaptability
- Communication
- Leadership
- Presentation
- Team management

Technical

- Python
- SQL
- JavaScript
- C/C++
- C#
- MySQL
- MongoDB

- Data analysis
- Machine Learning
- Computer Vision

- ReactJS
- Angular
- NodeJS
- FastAPI
- Numpy
- Seaborn
- SKlearn
- Tensorflow

- Git & GitHub
- Postman
- ChatGPT
- MS-Office

RESEARCH

“ICRAECA - 2025, IFERP”

Research Paper title: “Metaverse demystified: Design Insights, Deployment, Intricacies and Mitigations”

- Presented the research paper at international conference held at LJ University
- Paper dives into metaverse to understand its fundamentals and usage
- Further exploration about challenges and probable solutions
- published on JSMS journal - doi.org/10.47974/JSMS-1537

SkillSwap (MEAN)

- Enables users to exchange skills and knowledge. It empowers users to teach the skills they know and learn the skills they want by connecting with others in a collaborative, community-driven environment.
- Includes role based access control with OAuth verification and basic real time chat facility
- Interactive Admin Dashboard with KPIs and other visuals for real time monitoring

Crypto Analysis & Forecasting (Python, Jupyter)

- Comprehensive exploratory data analysis (EDA) and advanced financial & crypto market analysis using cutting-edge machine learning Includes data preprocessing, trend analysis, predictive modeling.
- Python + ML-based prediction model for analyzing crypto market trends and built on various datasets from Kaggle

TaskQuest(MERN)

- A powerful task management system which supports multiple user roles with strong authentication, role-based access control, and an intuitive, responsive UI.
- Solution that improves task organization, team communication having collaborative task board with real-time updates, comment system.
- Admin Dashboard for performance monitoring

Price Forecast using Live Market Data (Python)

- Collected and processed live market data using yfinance API for real-time analysis.
- Performed Exploratory Data Analysis (EDA) and engineered key indicators such as Exponential Moving Average (EMA), Price Change, Trend Analysis and so on to derive quick insights.
- Built and trained a forecasting model to predict stock close prices based on historical market data.
- Implemented a customized, dynamic model that adapts to varying timeframes and intervals

Primary HealthHub (Django)

- Designed to streamline the healthcare operational processes. It supports three types of users: Patients, Staff, and Admin, each with clearly defined roles and permissions Patient management with appointment booking, medical records, and doctor-patient interaction.
 - The system emphasizes strong validation and authentication, dynamic staff allocation, and realtime reporting for administrators
-
